PRODUCT BULLETIN

WET-3110

ALKALINE CLEANER

DESCRIPTION

WET-3110 is a multifunctional liquid alkaline cleaner for cleaning new HVAC hydronic systems. It is a liquid blend of phosphate, solvent, dispersant, and corrosion inhibitor.

BENEFITS

- Improves heat transfer efficiency
- Improves the performance of the scale and corrosion inhibitors
- Helps extend equipment life
- Reduces maintenance time and costs
- Compatible with typical HVAC recirculation pumps

APPLICATIONS

WET-3110 removes the petroleum based inhibitors that are typically used on new equipment and pipes, to prepare the metal surfaces for the water treatment inhibitors.

DOSAGE

Add 5 gal per 1000 gallon of system water. If applicable, raise the water loop temperature to about 120 °F to enhance the cleaning process. Circulate the water loop for at least 12 hours via the HVAC recirculation pumps or other compatible external pumps. When the cleaning process is completed, drain and flush the system with fresh water. Continue flushing until the final conductivity equals the fresh water conductivity.

Note: Upon completion, the corrosion inhibitor must be added immediately to prevent flash corrosion.

FEEDING

WET-3110 is non-corrosive to ordinary metals used in feeding devices. Feed WET-3110 to system with any type of by-pass feeder or proportional pump.

MATERIAL SAFETY DATA SHEET

For information concerning typical properties, health hazard, flammability, reactivity, handling & storage, please consult the MSDS.

PACKAGING

Available in 55, 30, 15, 5 gal drums, bulk shipments, and returnable 200 and 400 gallon tote containers.

WET-3110

TECHNICAL ASSISTANCE

Our technical staff is available to assist in the application of WET's products. You may request assistance through your sales representative or by contacting WET, Inc at (877) 938-4621.

OTHER REMARKS

Improper application of this product will result in insufficient protection and/or potential damage to the system being treated. Please follow the recommendations of your WET representative.

The information and statements herein are believed to be reliable, but are not to be construed as warranty or representation for which we assume legal responsibility.
